

Mounting Interface

Single-Sided Manifolds

For Use with G1/8 Ported Valves

Pipe thread manifolds are an economical and efficient choice for grouping pneumatic valves and other components in applications where space is limited. In addition, manifolds help to reduce potential leak points and allow for faster installation with one common air supply and less piping. Clear anodized aluminium.

Part No.	Description
M-EGVM-2	2-Station Manifold
M-EGVM-4	4-Station Manifold
