

CORDIS SERIES

High Resolution Proportional Flow Controller

Operating Instructions

The Cordis CFC series are closed-loop flow controllers designed to maintain a steady and repeatable downstream flow as demand process changes occur. Cordis is available in a compact card style (CFC-C: Card Unit) or with an IP65 rated enclosure (CFC-H: Housed Unit) for manufacturing and industrial environments. Both styles come standard with one Clippard proportional electronic valve.

Technical Data

ELECTRICAL	
Voltage	15 to 24 VDC
Current Draw	≤ 250 mA max.
Protection Rating	IP65 (housed unit only)
Warm-Up Period	<1 minute
Signal/Command	<i>Electrical</i> : 0.2 to 10 VDC or 4.32 to 20 mA <i>Serial</i> : 3.3 VDC
Turndown Ratio	50:1
PERFORMANCE	
Valve Type	Normally-Closed Proportional
Accuracy	\leq 2% of full scale
Resolution	≤ 25 mV
Linearity	≤ 1%
Repeatability	≤ 1%
Linearity	≤ 1%
Max. Hysteresis	≤ 1%
Max. Inlet	60 psig
Flow Range Sensors	0 to 0.03 l/min, 0 to 0.2 l/min, 0 to 0.5 l/min, 0 to 1 l/min, 0 to 4 l/min, 0 to 6 l/min, 0 to 15 l/min
Pressure Drop	≤ 14″ H2O
Response Time	< 50 ms typical (application dependent)

	IdDIE: I
WETTED MATERIALS	
Sensor	Polyamide
Manifold	Anodized aluminum
Valves	DVP: Stainless Steel, PPS EVP: ENP Brass
Regulated Supply	ENP Brass
IP65 Housing	Polycarbonate
OPERATING CONDITIONS	
Operating Flow Range	Minimum: 0 to 15 sccm Maximum: 0 to 15 l/min
Operating Temp.	32 to 120°F (0 to 49°C)
Medium	Clean, dry, non-corrosive gases
Port Size	1/8″NPT, G1/8

Website	clippard.com/link/cordis

Table 1

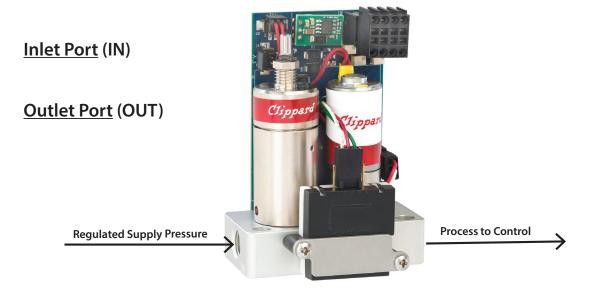

Operational Description

The Cordis Flow Controller is designed to accept a constant regulated pressure on the inlet port. The outlet port should be connected to the downstream process side of the application. As the command signal increases the proportional valve modulates open, which allows flow to pass through the internal flow sensor. This flow sensor is constantly providing active feedback to the microcontroller. As soon as the feedback matches the user-specified command, the proportional valve holds the commanded flow. If at any point the sensor measures a higher flow value than the set point or if the user-specified command is lowered, the proportional valve will modulate closed to maintain a stable and accurate flow control in the process. Likewise, if any increased consumption occurs downstream, the proportional valve will modulate open and instantly compensate to maintain desired downstream flow.

Mounting

The Cordis series can be mounted in any orientation without negatively affecting process control. Both the CFC-C and CFC-H models come standard with convenient (top-down) mounting holes for easy mounting to most flat surfaces.

CFC-C Pneumatic Plumbing

Safety & Best Practices

- Inlet pressures >60 psig could damage the flow sensor.
- Recommended filtration for supply media is 40 micron or better.
- **I** Supply pressure dependent on calibrated flow range.
- Disconnect power if supply pressure is not connected.
 - When changing fittings, thoroughly clean all tape and/or debris from the port connections.
 - Properly regulated inlet directly affects accuracy of flow controller.
 - Preferred sealant for 1/8" NPT ports is Loctite 545 or face seal. If thread tape is required, make sure to start wrap after the first two threads to reduce the possibility of valve contamination.
 - Always take precautionary measures while handling exposed circuit boards: Hold circuit board on edges whenever handling device. Store device in anti-static bag to prevent possible ESD from damaging circuitry.

Calibration

The calibration of the Cordis series is done at the time of manufacture to NIST traceable standards. Each unit is calibrated and the PIDs are set to the Cordis standard tuning. If a customer's specific application details are known prior to manufacture (recommended), the PIDs will be tuned in accordance with the known specifications to provide the most stable and repeatable control. Below are the available calibration ranges.

Table:2 Calibrated Flow Ranges		
CALIBRATED FLOW		
0 to 0.03 l/min / 0 to 30 sccm		
0 to 0.2 l/min / 0 to 200 sccm		
0 to 0.5 l/min / 0 to 500 sccm		
0 to 1.0 l/min / 0 to 1,000 sccm		
0 to 4.0 l/min / 0 to 4,000 sccm		
0 to 6.0 l/min / 0 to 6,000 sccm		

Recalibration

The Cordis series does not require recalibration during its lifetime. If the calibration needs to be changed and/or modified, the unit must be returned to Clippard or completed by a certified field technician. Any attempt to recalibrate in the field without prior authorization will void the warranty.

Please contact Clippard for all Return Material Authorization (RMA) requests:

Please have the serial number(s) available for reference.

0 to 10 VDC Electrical Connection | CFC-C

Make sure AC power is disconnected before DC connections are made

The Cordis requires 15 to 24 VDC on **Pin 1** of the electrical connector. It uses 0.2 to 10 VDC command signal on **Pin 3** of the electrical connector. The power supply ground, command source ground and **Pin 2** must be tied together. If the analog monitor signal is being used, utilize **Pin 4** to send the 0.2 to 10 VDC signal to a measuring device like a volt meter, panel meter or acquisition device.

Serial Configuration

Cordis utilizes a 3.3 VDC communication signal

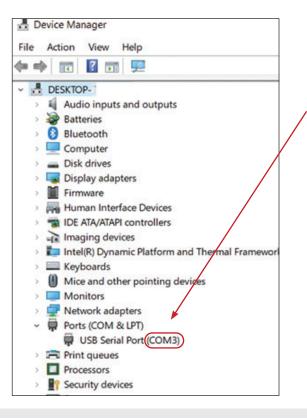

To communicate via Serial with the Cordis, software is required. Many serial software communication solutions are available. If you already have a software solution, please ensure it is configured with the specifications listed below (Table:6) prior to making the electrical connections to Cordis. The commands can be found on Page 13.

If you do not already have a serial software solution, we recommend PuTTY as a free and open-source solution. PuTTY is one of the most common software packages used for serial communication and can be downloaded here: https://putty.org/

Once downloaded and installed on your windows based machine, please follow the steps below to configure the software prior to making the electrical connections to Cordis. The specifications we will configure and/or confirm within PuTTY are listed in Table:6.

Table:6	Table:6Serial Software Configuration (PuTTY)		
	SETTING LABEL	SPECIFICATION	
	Speed (baud)	57600	
	Data Bits	8	
	Stop Bits	1	
	Parity	None

	Serial Line	See Steps 1 & 2	

STEP - 1

- Ensure proper serial connection to Cordis unit and then connect 3.3 VDC serial to the control device. The wiring schematics can be found on pages 14 and 15.
- 2) Open Device Manager and identify the serial port assigned to the serial cable.

Limited Warranty

All information contained in this publication is for reference only. Proper design engineering procedures should be used to assure any compliances. Clippard Instrument Laboratory, Inc. reserves the right to make changes without notice and does not warrant or guarantee the information contained herein.

Clippard Instrument Laboratory, Inc. (Seller) warrants its products to be free from defects in material and workmanship for a period of one (1) year from the date of sale. Seller's liability shall be limited at seller's option to repair, replace or refund purchase price of product found by seller's examination to be defective. All claims under this warranty must be made in writing to seller's factory sales department giving full details, prior to return of product, postpaid, to factory. Seller shall not be responsible for product failure due to normal wear, accident, buyer's misapplication, abuse, neglect or alteration of product. Seller will not be responsible for any consequential damages. Clippard makes no other warranty of any kind, expressed or implied. Circuits shown in this catalog are for instructional purposes only. All circuits used on equipment and machinery should be thoroughly tested by qualified personnel under actual working conditions to determine their suitability for buyer's intended use. All technical data and operations are average values based on standard production models. Some deviations can be expected and considerations should be given during initial design stages. All operating characteristics are based on new equipment, under normal conditions of use and environments and oil free air supply. Dimensions stated may be nominal and are subject to change without notice. Contact Clippard for specific dimensional tolerances when dimensions are critical.

Proudly made in the USA.
