### CLIPPARD PILOT-OPERATED CHECK VALVES

*Cincinnati, Ohio* -- Clippard Instrument Laboratory, Inc., introduces the new JPC Series check Valves. The JPC series utilizes Clippard's superior poppet design and provides a variety of port configurations.

The JPC Series works as a standard check valve, but can be operated with an air pilot signal providing for "free flow" in the normally checked position. This new valve provides the user with a reliable method to check flow in one direction, with the ability to remotely signal a free flow through the valve. With high flow, low pressure and ease of connection, the JPC Series is an ideal check valve for many applications.

For complete detail about the JPC Series, or any of Clippard's other miniature pneumatic products, go to [www.clippard.com/jpc](http://www.clippard.com/jpc).
