HOSE & TUBING

tubing $\t^t(y)$ u-bing \n : a stiff material in the form of a tube used for conveying gases or fluids

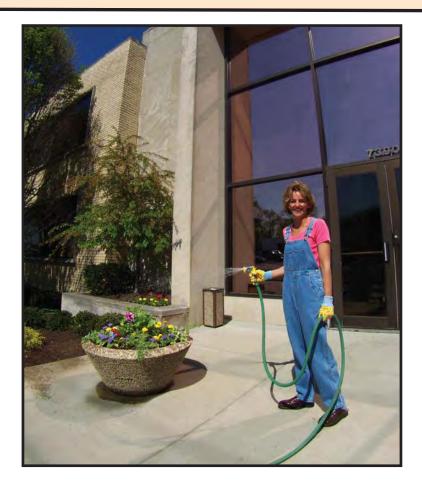

Do you use a garden tube?

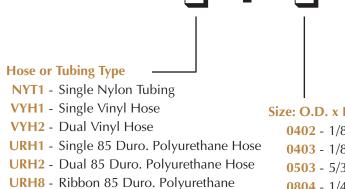

The answer to the question of whether to call it a tube or a hose rests on a fine line, one many people have gotten tangled up in. In both definitions it clearly states that a tube and a hose are used for conveying fluids, yet sometimes one word seems to fit the situation (and the application) better than the other.

So remember...

It's a hose when it's flexible and a tube when it's not.

Clippard offers a variety of miniature hose and tubing from copper and nylon tubing to flexible urethane, vinyl and Nitrile hose. The chart below lists these products and their available colors and lengths.

This chart is to be used as an explanation of our ordering system. See individual listings following this page for sizes and colors available.

URT1 - Single 95 Duro. Polyurethane

PET1 - Single Polyethylene Tubing

Tubing
