Leonard Clippard founded Clippard Instrument Laboratory, Inc. in 1941. The initial product line consisted of electronic test equipment and radio frequency coils. The manufacturing of these products required machinery employing the use of small, yet powerful, pneumatic cylinders and valves. Since no such products were commercially available, Leonard Clippard designed and built his own. Because the need for these components was widespread, particularly in manufacturing automated fixturing, Clippard presented them as a new product line in 1949.

Until his retirement in 1977, Leonard Clippard continued to be a pioneer in miniature pneumatic components. Today, the company is managed by William L. Clippard III, President and Robert L. Clippard, Vice President; the Minimatic® line has grown to include over 5,000 standard products.

The people of Clippard have many unique talents and abilities. They have built a wealth of experience in all aspects of miniature pneumatics. The company's headquarters are located in Cincinnati, Ohio. All sales and corporate offices are housed there as well as the manufacture of valves, modules, and fittings. Clippard runs over 25 automatic screw machines and 12 CNC machining centers to make most of its component parts. Some parts are also purchased from carefully selected vendors, most of which have a long term relationship with Clippard.

Extensive secondary operations and assembly complete the core of manufacturing. The unique aspect is the extensive use of Clippard products on all

machinery, fixtures, and jigs throughout the plant, most of which are custom made in Clippard's own shop. Clippard Minimatics® are widely used to speed and improve production. Few other manufacturers can demonstrate such an earnest commitment to the value of their own products.
