

HIGH PRESSURE EV SERIES

Clippard's EHV series are a high pressure version of the renowned EV series. They are precision-built 2-way control valves that accept low voltage, low current signals and convert them to high pressure (500 psig, 34.5 bar) pneumatic outputs. Like the original EV series, EHV series valves consume very little power and provide exceptionally long life. In addition, they are small in size, quiet, and produce very little heat. These features make them well-suited for a wide range of applications across a broad spectrum of industries.
