### CLIPPARD EVP PROPORTIONAL VALVES

*Cincinnati, Ohio* -- Clippard Instrument Laboratory, Inc. announces the addition of the EVP Proportional Valve series to its electronic valve product line. This product combines the features of the existing EV series valve – long life, low power, and rugged design and fast response.

The EVP Series valve provides control of air or gas flow, and varies the output flow based on the current input to the solenoid. Consistent gain provides a high degree of control for many applications.

Control and overall value are some of the main features of the EVP Proportional Valve. The valve may be controlled using DC current, open- or closed-loop control, and PWM (pulse width modulation) to cover a broad range of applications.
