## Clippard MAR-1 Series Miniature Pressure Regulators

*Cincinnati, Ohio* -- When Clippard introduced a miniature regulator in 1962, the MAR-1 became very popular as a **simple, robust, and cost-effective regulator in a small package with exceptionally long life**. As regulator applications continue to increase, Clippard is meeting the demand with a variety of new models, options and improvements.

Regulators are offered in either relieving or non-relieving versions. The relieving design maintains a constant pressure output even when downstream conditions change, while non-relieving regulators do not automatically compensate for changes in downstream flow or pressure. There is no vent to atmosphere, as in a relieving type regulator, and the output pressure can increase due to a downstream event.

- #10-32, M5, 1/8" NPT, R1/8, G1/8 & Cartridge Mounting Configurations
- Flows to 5 scfm
- Multiple Adjustment Options Available

For more information about these control valves or any of Clippard's 5,000 other pneumatic products, call 513-521-4261 or visit [www.clippard.com](http://www.clippard.com).
