

EFB Electronic Fill & Bleed Circuits

The EFB series electronic fill and bleed circuits are a combination of Clippard pneumatic valve components used to inflate a volume or apparatus in one controllable function, and to release or vent pressure in a second controllable function. Fill and bleed circuits are commonly used in many applications where a particular pressure, firmness, or position can be controlled with the addition or venting of pressure.

Material, Body	Black Anodized Aluminum
Medium	Clean, dry air and compatible gases
Notes	See EFB-1M for In-Line Manifold Only, or EFB-2M for Manifold Mount Manifold Only.
Weight (lbs.)	0.4250
